

**Amendments to the Specification:**

**The paragraph beginning at Page 3, lines 32-34, through to Page 4, lines 1-5 to be amended as follows:**

In terms of physical connection, most compact printer modules consist of a central body, a male connector at one end, and a female connector at the other. Since most modules have both a male and female connector, the modules can typically be connected in any order. Certain modules only have a male or a female connector, but this is determined by the function of the module. Adaptor modules allow these single-connector modules to be connected at either end of a given compact printer configuration. The modules connect such that the bodies of two adjacent modules abut each other, thereby maintaining a rigid unit for greater ease of operation.
